

Updates on Research

CLINICAL STUDY ON RETINAL ATROPHY NOW AVAILABLE

Dear

Partners,

We are happy to send you a recent clinical study on retinal atrophy treated with Low Dose Medicine (**GUNA-NT3, GUNA-NT4, GUNA-NGF**) in combination with Homotoxicology.

Title: **Increasing of visual function in patients with retinal atrophy treated with Low Dose Medicine. Monocentric retrospective observational study.**

Author: Luchetti Pietro

Published on: Minerva Oftalmologica 2014 Settembre-Dicembre;56(3-4):53-61

Impact factor: 1.236

At present, there is no established therapy for treating atrophic retinal forms, often the end stage of many retinal diseases. This observational retrospective study aims at assessing the ability of Low Dose Medicine drugs to promote the regenerative phase of retinal horizontal cells. Results show that Low Dose Medicine represents a **promising therapeutic strategy for regeneration after retinal atrophy...**
